HANDS-ON LEARNING LOG

# Git Essentials

The commands I practiced,
and why each one matters.

```
$ git init && git commit
```

Swipe to see 7 topics >>

01

# Git Version & Configuration

Check your setup before you start

```
git -v
```

Check Git version.

```
git config --get user.name
```

Check Git username.

```
git config --get user.email
```

Check Git email.

```
git init
```

Initialize Git in a folder.

02

# File Management & Staging

Move changes into the staging area

```
vim test.txt
```

Create or edit a file.

```
cat test.txt
```

View file content.

```
git status
```

Check repository status.

```
git add test.txt
```

Add a file to the staging area.

```
git rm --cached new.txt
```

Remove a file from Git tracking but keep it locally.

```
git rm -f anny.txt
```

Force-remove a file from Git and the computer.

# 03

# Commit & History

Save snapshots and travel back in time

**`git commit -m "message"`**

Save staged changes as a commit.

**`git log`**

View commit history.

**`git log --oneline`**

View commit history in short format.

**`git reset --hard <commit-id>`**

Reset the branch and tracked files to a specific commit.

**`git reflog`**

View recent HEAD movements and find previous commit positions.

# 04

# Git Ignore

Keep unwanted files out of the repo

**`vim .gitignore`**

Create or edit .gitignore.

**`git add .gitignore`**

Stage the .gitignore file.

**`git add -f new.txt`**

Force-add an ignored file.

05

# Branch Management

Work on features in isolation

**`git branch --list`**

List local branches.

**`git branch dev`**

Create a new branch.

**`git switch dev`**

Switch to another branch.

**`git branch -m developer`**

Rename the current branch.

**`git branch -d developer`**

Delete a safely merged branch.

06

# Merge & Conflict Resolution

Bring branches together

**`git merge test`**

Merge the test branch into the current branch.

**`git status`**

Check merge conflicts.

**`git add anny.txt`**

Mark conflict resolution as complete.

**`git commit`**

Complete the merge.

# 07

# Git Stash

Park unfinished work safely

### `git stash`

Temporarily save tracked, uncommitted changes.

### `git stash list`

View saved stashes.

### `git stash pop`

Restore the latest stash and remove it if successful.

### `git stash -p`

Selectively stash changes.

# Practice > Theory

I ran every one of these commands,
broke things, fixed them with reflog,
and resolved real merge conflicts.
